

TEAM 4 - Bradley Vall and Janardhen Jayavel

TOPIC: 1.HEAP BASED PRIORITY QUEUE

Myself and Bradley spent time together over zoom meetings for planning of this project. We looked into pseudo codes and they pretty much helped with construction of the functions that are needed for the projects. I wrote functions from pseudo code and matched them working well. Brad used to review the code and Brad wrote the test cases for them. We both had frequent file updates sent over discord and we both checked the tests pass after each one's work. Atlast, we had an issue with insert function and we both fixed it in the last few hours. Communication was never a problem with both of us.
